## ABSTRACT:

PROBLEM TO BE SOLVED: To protect software against illegal use by enabling an acquirer to use a software package only on equipment obtained for the software package together with it.

SOLUTION: Each time the equipment is actuated, software sw inspects whether or not identification words iw1 and iw2 stored in memories m1 and m2 of devices g1 and g2 are present in a database dbb of the owner. The software sw checks whether or not key words kw1 and kw2 are stored in the memories m1 and m2 of the devices unless the identification words iw1 and iw2 are present or if they are present, but incorrect. When the key words are stored, the software sw stores the key words kw1 and kw2 in the database dbb of the owner together with the corresponding identification words iw1 and iw2 and then electronic control over the devices and the processing of data are performed for the 1st time.
